A fan tells Julia Szabo why she adores her barnyard babies. Feb 1, 2009 Susan Thomas Farm Animals As Pets? A fan tells Julia Szabo why she adores her barnyard babies. 1 in 4 Animals like Pets We don't watch TV, but we never miss the distraction – the animals provide a nonstop source of entertainment, says Susan Thomas of the 78 beloved creatures who share her 240-acre Missouri farm. There's nothing like watching five donkeys play Follow the Leader at top speed. Susan's blog, Farmgirl Fare (farmgirlfare.com), is filled with posts about her raking of pets, which include dogs, cats, sheep, chickens, donkeys — and this spring, goats. So can cattle really steal your heart like a pooch does? Absolutely, says Susan — the farm's animals are surprisingly affectionate. Describing Cary, a lamb she raised from childhood, Susan recalls: During the first five months of her life, she thought I was her mother. The cute baby lamb loved to follow the blogger wherever she went, even earning a nickname — the Living Room Lamb — because she would often curl up at Susan's feet while she signed off at her computer! 2 of 4 Donkeys Donkeys like to stop and study new situations, which may seem like stubbornness, but they love attention, susan says. 3 of 4 Chickens Adult chickens can be domesticated, but for a devoted pet who likes to be held and nap in the lap, start with a hand-raised chick. 4 out of 4 May Forget the stereotype of stupid sheep. Susan says one of her lambs used to knock on the door to get in! Country Living's 2008 Pitch Your Product Winner Ad – Continue Reading below This content is created and maintained by a third party, and imported on this page to help users provide their email addresses. You may be able to find more information about this and similar content on piano.io This page contains information about the ProP169 Farm Pack for veterinary use. The information provided typically includes the following: ProP169 Farm Pack Indications Warnings and Precautions for ProP169 Farm Pack Direction and Dosage Information for ProP169 Farm Pack This treatment applies to the following species: Company: Bio-Vet Direct Fed Microbial for Dairy Cattle Provides high levels of Propionibacterium freudenreichii strain P169, a room origin bacteria proven to dramatically improve the rooms propionate yield.* In a formula that can be used as a top dress guaranteed analysis : (minimum per pound) Live bacterial count: 1.92 Trillion (1.92 x 1012) CFUs (Propionibacterium freudenreichii strain P169) INGREDIENTS: Calcium carbonate, dried Propionibacterium freudenreichii fermentation product. RECOMMENDED USES: Feed for all high-producing dairy cows, dry and transitional cows, during ration changes, pre- and post-delum. FEED INSTRUCTIONS: Top dress, mix with barley mixtures, soft lining total mixed ration at the following pace Adult Dairy Cows: 1/2 ounce per capita per day * Data on file at Bio-Vet, Inc. PRODUCT CODE GN-00215 15 lb. (480 feeding) bags (4/ cases) GN-00216 50 lb. (1600 feeding) bag (1/Case) GN-00216 One peat pallet (40 bags, 50 lb. each) Bio-Vet, Inc., 300 Ernie Drive, Barneveld, WI 53507, U.S.A. Updated: 2020-11-27 The word that translates into Spanish in many ways—and you often can't replace one of them for another. A trick to translating that into Spanish often involves figuring out how it works in one sentence and coming up with another way to express the same idea. Although the following is not a complete list of the ways that can be used and translated, it contains the most common. One of the most common uses for which in English is in pairs to indicate that two things or actions are equal. Such comparisons of gender equality are usually made with the phrase tan ... como (where the ellipses represent an adjective or adverb) or tanto ... como (where the ellipses represent a noun and tanto changes in shape to match nouns in number and gender). Nunca a mi vida había sido tan feliz como hoy. (Never in my life have I been as happy as I am today.) También me enamoré de mi primera maestra, tan locamente como es posible en un niño. (I also fell in love with my first teacher, as crazy as possible for a child.) Podrías ganar tanto dinero como usted quisiera. (You could make as much money as you like.) If you have an English meaning with the word that and you can replace that with the like (although some language purists may frown on you to do so), that probably means something like that in the way that. Como usually works well as a translation. Me gustaría saber si piensas como pienso. (Leave it as it is.) Déjalo como está. (I'd like to know if you think as I think.) Como saben todos ustedes, el primer punto del words del día es la elección del presidente. (As you all know, the first item on the agenda is the election of the president.) Como iba diciendo, todo era perfecto. (Like I said, everything was perfect.) Como como si fuera a ser su última vez. (He eats as if it were to be his last time.) Among the other uses for which is: When because can replace that, which can usually be translated as porque, although como is preferable at the beginning of a sentence. Read more details in our causation lesson: Buscaba agua porque tenía sed. (He was looking for water that was thirsty.) No pillow pillow con claridad porque estaba oscuro. (I couldn't see clearly, because it was dark.) Como yo no tenía dinero, no pude comprar el coche. (Since I had no money, I couldn't buy the car.) When or when can replace that, mientras can be used to indicate that two or more actions are taking place simultaneously: Mientras estudiaba veía la CNN. (When he was studying he saw CNN.) Mientras comíamos, decidí decirselo a todos los que estábamos allí. (When we ate, I decided to tell all of us who were there.) When that acts as a preposition for introducing a prepositional phrase that acts as an adjective or adverb, it can often be translated as como. The first two of these examples are of adjectival use, the second two of adverbial use. Es retrato de Jonah como joven artista. (It's a portrait of Jonah as a young artist.) Mi vida como un soldado comenzó en 2010. (My life as a soldier began in 2010.) Anda como ladrón en la noche. (He walks like a thief in the night.) Estudia como carrera de química. (She is studying as a chemistry major.) Idioms (phrases with which have meanings not necessarily attached to those of the individual words) with which and common counterparts include: also known as: alacas a consequence: a consecuencias a joke: a bromas directed: como se indica, según lo indicadoas expected: como era de esperaras far as I am worried: a lo que a mi respectas if: como sias necessary, as needed: como sea necessaryas of now: por ahora, hasta ahoras soon as possible: lo antes posiblesuch as: tal como (when you follow a singular noun), stories como (when you follow a plural noun) Como is a common Spanish translation for which, although it is situations where it can not be used. Mientras can translate as when used to indicate that actions occur simultaneously. Porque can translate as when used to indicate why something happened, especially when in the middle of a sentence. If there is one trait that separates humans from animals, it is the ability to grow food. But you might be surprised that people weren't the first farmers. A number of amazing animals discovered agriculture long before humans evolved as a species. There are insects that practice animal husbandry, fish as a farm, and even jellyfish horticulturalists. Agriculture was once thought to be a feat reserved only for big brain hairless monkeys, but it turns out that animals don't need a central nervous system to nurture crops. Here is our list of seven amazing animal agriculturalists. Leaf cutter ants are not only farmers; they are factory farmers. They collect leaves to grow a fungus that grows on the leaves. Leaf cutter ants protect the crops from pests and mold. They then feed the fungus, not the leaves, to their larvae. Many believed that these ants from Central and South America ate the leaves they had collected. Instead, they farm and sometimes, like humans, have difficulty with crop failure. David Siu / Flickr / CC BY 2.0 Very leaf cutter ants, many termite species are mushroom farmers. The giant mounds built by some termite colonies are complex, temperature-controlled structures. These structures are necessary to maintain the ideal growing environment for their mushroom food source. The termites begin by chewing the plant material and feeding it to the fungus. The fungus then grows into mushrooms, creating a food source for the termites. Although they are considered household pests, termites form some of the most complex societies in the animal kingdom. Greg Grimes/Flickr/CC BY-SA 2.0 These feisty farmers are the only fish known to engage in agriculture. Damselfish is an algae grower. They are so protective of their crops that they have attacked other creatures that swim too close - even human divers. The algae they prefer are a species that is weak and rapidly overgrazed, compared to other species of algae. If it weren't for such dedicated farmers, the algae would be challenging to find. It tends to survive only within the protective areas of damselfish. Henrik_L/Getty Images Named after the fungus they grow, ambrosia beetles are bark drills that grow their crops within rotting trees. A common misconception is that these beetles eat the wood. In reality, they carried through the wood and introduce the ambrosia mushrooms that they eat. When a chamber is ready, the beetles tend carefully to their crop, which feeds both adults and larvae. The beetles often leave a ring of what looks like sawdust around the tree as they push wood sids out of the holes they were carrying. Joshua McMichael / Flickr / CC BY-SA 2.0 Several ant species of black lewit in much the same way that humans hold livestock for milk. Instead of milk, aphids secrete a sweet liquid called honey dew that the ants devour. Ants go to great lengths to take care of their aphids, often training them to accomplish their lives in a way that makes it easier for the ants to gather and eat honey dew. In fact, well-trained aphids will often withhold their honey dew until they are ironed and milked by ants. Even more fascinating, ants will usually carry their aphids to new pastures and protect them from predators. In extreme cases, ants will cut off their domesticated aphid wings to prevent them from flying away as they mature. They even encourage a mixture of aphids, so they have a balance of types. Mary Hollinger, NESDI/SNODC biologist, NOAA/Flickr/CC BY 2.0 Marsh periwinkles (Littoraria irrorata), a type of snail usually found throughout the southeastern United States, prefers to feast on a mushroom as they farm in wounds on cordgrass leaves. These wise snails use their coarse, tongue-like radula to cut grooves into cordgrass leaves, creating the perfect growing environment for their favorite mushrooms. Scientists have even discovered snails have fertilized their fields through feces in their tracks, further helping the fungus grow. Brian Gratwicke/ Flickr/CC BY 2.0 Spotted Jelly, also known as Lagoon grow algae food inside their tissues. During the day, spotted jelly usually orient itself clock side down and tentacles up. This position ensures that the photosynthetic crop in its tentacles gets enough light. They spend most of their time chasing daylight and tend their inner gardens. Shane Ahyong / Wikimedia Commons / CC BY 2.5 Yeti crabs farm bacteria on their hairy claws. Geological scientists found crabs when looking for methane seeping in the sea off Costa Rica; bacteria get their energy from the inorganic gases coming from sea vents. The crabs wave their claws to create movement in the water – this in turn feeds the bacteria with the oxygen and sulphide it needs to grow. When the crab is ready to eat, it uses comblike mouth parts to harvest its meal from the brush. Bristles.
